

CLEANING PROCEDURES FOR ALL ORDERED LINENS & TOWELS

Hot Water Settings - Ensures Proper Heat is Applied to Activate Chemicals

Cyclone Mxi
MODULATING

Chlorine Bleach is used on all sheets and towels. It is one of the strongest and most effective disinfectants. Kills bacteria, fungi, viruses and flus.

COMMERCIAL LAUNDRY SOLUTIONS

CHLORINE BLEACH

We wrap everything in a plastic shrink wrap before it leaves the laundry.

It is delivered in this same plastic wrapping directly to each unit!

All baby equipment is wiped down with approved disinfecting wipes

We follow strict washing procedures and processes such as pre-determined, automatically dosed chemical formulas, our washing machines specify water temperatures and chemistry as well as allocate specific amounts of time for soaking, rinsing, spinning and other wash cycle functions in order to produce hygienically clean linens and towels. In addition to the wash/dry cycles we also plastic shrink wrap every single item before it leaves the laundry to ensure that it reaches each unit the same way it left our washing machines.
